

## CLEMENTINE NOVA

### AVAILABILITY

JANUARY 	FEBRUARY	MARCH	APRIL	MAY	JUNE
JULY	AUGUST	SEPTEMBER	OCTOBER	NOVEMBER	DECEMBER 

### FRUIT TRAITS

SHAPE	oblate	PEELING	medium
WEIGHT	170 g	FLESH COLOUR	deep orange
RIND COLOUR	deep orange	JUICINESS	medium
RING	smooth	SEEDS	variable, from 0 to 6
RING THICKNESS	thin		

### PLANT

#### AGRONOMIC TRAITS

PRODUCTIVITY	medium
ALTERNATION	absent
PERSISTENCE OF RIPE FRUIT	medium

#### VEGETATIVE TRAITS

ENERGY	medium
SPININESS	absent
BEARING	assurgent
FOLIAGE	compact

### ORIGIN

Nova variety is a hybrid between Tangelo Orlando and the common Clementine, obtained in Florida in 1942. In Spain it took the name of Clemenvilla.

### SINTHETIC CONSIDERATION

In recent years, it has become very popular thanks to its fruit's good taste. It has several seeds and is seedless if grown far from pollinators. In low rainfall winter years and in shallow soils, the fruit dries early. It is also susceptible to fruit splitting.
